A point counts as exercised when the panel reported a fault, alarm or pre-alarm for it during the test. Isolate / de-isolate messages are logged but do not count on their own.

AS 1851-2012 sets the yearly share by device type, counted on each circuit: 50% of smoke, CO and multi-sensor detectors (all within 2 years); 20% of heat detectors, capillary sampling points and alarm acknowledgement facilities (all within 5 years); every manual call point, flame, beam and aspirating detector, and every device that releases a suppression system. A device counts as tested when the panel reported an alarm or pre-alarm for it during a monthly, six-monthly or annual test in the year (11 sessions so far), or when a technician marked it tested by hand. Outputs and sounders aren't counted. Figures are as at 11 Nov 2026, 5:46 pm.

CIRCUIT	DEVICE TYPE	TESTED	YEARLY TARGET	STILL TO TEST	NOTES
Loop 1	Smoke detectors	6 / 12	6 (50%)	On target	
Loop 1	Heat detectors	1 / 3	1 (20%)	On target	Include the last detector on the circuit, and each model and environment
Loop 1	Manual call points	4 / 4	4 (100%)	On target	
Loop 2	Smoke detectors	16 / 16	8 (50%)	On target	
Loop 2	Heat detectors	2 / 5	1 (20%)	1	Include the last detector on the circuit, and each model and environment
Loop 2	Manual call points	3 / 3	3 (100%)	On target	
Loop 3	Smoke detectors	5 / 10	5 (50%)	On target	
Loop 3	Heat detectors	0 / 2	1 (20%)	1	Include the last detector on the circuit, and each model and environment
Loop 3	Manual call points	2 / 2	2 (100%)	On target	
Loop 3	Aspirating (VESDA)	1 / 1	1 (100%)	On target	Test from the last sampling point on every pipe run

Failed tests (1)

CIRCUIT	ADDRESS	DESCRIPTION	WHAT HAPPENED	DATE	BY	NOTE
Loop 2	L2D19	LEVEL 2 PLANT ROOM	Failed	2026-11-11	Sam Taylor	No response to heat

Loop 2: a device failed, so at least 10 more on the circuit have to be tested (10 of 10 done since).

Still to test this year (2)

CIRCUIT	ZONE	ADDRESS	TYPE	DESCRIPTION	LAST TESTED	WHY
Loop 2	4	L2D19	Heat detector	LEVEL 2 PLANT ROOM	–	Failed
Loop 3	6	L3D11	Heat detector	LEVEL 3 CHEMICAL STORE	2024-11-12	Couldn't test: No access, key not on site

The yearly share can be made up with any devices of that type on the circuit; the ones listed have waited longest. Devices marked out of time have to be these ones.

APPENDIX · FULL EVENT LOG

28 events, in the order the panel reported them. Times are Australia/Sydney. Grouped by point so repeats read as a sequence; a point heading repeats when its events continue onto another page.
